Customer summary

captura.png · Evidence ID: E0001 · Case: SAMPLE-1

No issues found

The file was hashed and checked. The checks applied found no issues.

What we did

Each file was opened read-only and hashed in a single pass with the selected algorithms, and its real type was identified from its signature. JPEG, HEIC, PNG and WebP images were then re-read in an isolated process and the bytes read were hashed again and compared with the first pass. The image analysis read the file structure and metadata, compared the JPEG quantization tables with the IJG standard and the fingerprint databases, looked for double JPEG compression, wrote the selected visual maps (error level, noise, JPEG ghosts), searched for copied-and-moved regions, compared the embedded thumbnail with the main image and, when reference images were given, compared the image with them. HEIC pixels are not decoded (structure and metadata only). Every action and every file written was recorded in a hash-chained audit log.

What the checks looked at

Format	PNG
Dimensions (pixels)	64 × 48

What we found

None

Digital fingerprint

This fingerprint identifies the exact content of the file. Any change, even of one character, would produce a different value.

sha256	`666ed73f0863f60ec48123834935c56c7ec98487834fa366fc0d7be8a1fa03c5`

Recommended next step

No action needed for this file.
