Run statistics report

Run ID: 20261029T110057Z-95dba9

Tool	rv-imgauth 0.1.0
Case	SAMPLE-1
Examiner	Examiner Image
Started (UTC)	2026-10-29T11:00:57.273Z
Finished (UTC)	2026-10-29T11:00:57.325Z
Duration	0.1 s
Interface	cli
Hash algorithms	sha256
Items	2
Bytes	1837
Errors	0
Throughput	35.2 KiB/s

Findings by severity

High	0
Medium	0
Low	1
Informational	2

Findings by type

Little or no camera metadata	1
Standard (IJG) compression tables	1
Compression tables not in the database	1

Items by detected type

JPEG image	1
PNG image	1

Duplicate groups

None

Image overview

Images examined	2
Images whose analysis did not complete	0
Items without report files (--item-reports flagged, no issues found)	0

Case folder

Case	SAMPLE-1
With an evidence ID from intake	0
Newly registered by this run	0
Verified against the registry	2
Different from the registry	0
Not in the registry	0
Case folder	/tmp/tmp.sVTkOe7IbL/case

Items

#1 E0001 captura.png	No issues found · 354 bytes · 0 findings
#2 E0003 foto-1.jpg	Needs attention · 1483 bytes · 3 findings

Limitations

- An image without findings is not proven authentic: careful edits can leave none of the traces these checks look for, and it is impossible to prove a negative (SWGDE 18-I-001).
- Error level, noise and ghost maps are visual aids for a trained examiner; the tool gives them no score and draws no conclusion from them.
- Double JPEG compression shows the image was saved more than once; ordinary sharing and exporting do this.
- The compression-table database covers few devices and apps (built from Rakvor's own captures plus local learning); an absent or matching entry is weak evidence on its own.
- Copy-move detection compares blocks at the same scale and orientation on a downscaled image: scaled, rotated or small copies are not found.
- Error rates of these checks have not yet been measured on a documented validation corpus; the findings are signals to be weighed by the examiner.
- Modification times come from the file system of the examined copy and may differ from the original source.
- A trusted timestamp proves the audit log existed in this exact form at the stated time; it does not prove that the examined copy matches the original source.
- Type detection uses a limited table of common file signatures; unknown types are reported as unknown, not as suspicious.

Trusted timestamp (RFC 3161)

Status	Not requested
Digital signature	This PDF is not digitally signed.

Audit trail

Audit chain head (SHA-256)	`5324b052c800db5acffe779733389ae99d188ebdb69891ae157e3fb07950ebf8`
Audit entries	23
Log folder	`/tmp/tmp.sVTkOe7IbL/case/runs/rv-imgauth/20261029T110057Z-95dba9/logs`
